SVED

10.5 months

Rental Discount Compared to Market Leader: Up to 20%

Disposable Discount Compared to Market Leader: Up to 50%

Features and Benefits

- **The SVED NPWT device**
Designed for simplicity and safety, the SVED NPWT device is suitable for all healthcare settings and is eligible for reimbursement under most coverage policies and state mandates.
- **One-touch therapy**
ITI innovated one-touch therapy. A single button on the SVED activates therapy. Choosing one of 3 buttons selects and locks pressure settings.
- **NPWT with simultaneous irrigation**
The SVED and the Svedman are the only devices that can deliver NPWT with simultaneous irrigation – providing, when medically advised, beneficial fluids without interrupting NPWT. You can easily modify irrigation fluid content and delivery rate.
- **30 years of therapy and research**
The ITI Wound Treatment System is based on 30 years of clinical research by NPWT pioneer, Dr. Pål Svedman, a plastics and reconstructive surgeon and Professor of Medicine working in Malmo, Sweden.
- **Specialized components**
ITI offers foam dressings, the gold standard in NPWT. ITI Black Foam Dressing minimizes debris when cut; reticulated pores promote consistent tissue granulation. ITI White Foam Dressing is flexible wet or dry. We are the only manufacturer to offer a specialized drape protecting the periwound area of patients with fragile or aging skin – ITI SensiSkin Drape for Sensitive Skin.
